## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1 and 3-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over RO-102047 A.

4. The rejection set forth under 35 USC 103 in the paper mailed May 4, 2006 is deemed proper and is herein repeated. The remarks and declaration filed in support thereof on October 6, 2006 have been fully considered but have been found not persuasive. It is noted that the declaration contained no actual showing or results. Rather, the inventors rationale as to why the claims are patentable. The reasons advanced by the inventor are consistent with those restated in the remarks and will be addressed below:

5. Applicants argue that the RO-102047 shows PVC in an amount of 0-75 parts and that this does not render obvious the claimed limitation of “substantially free of PVC.”

This is not persuasive. The claim language “substantially” broadens the claim so as to allow some amount of PVC in the composition. As such, compositions having minor amounts of PVC are within the scope of the claims.

6. Applicants point out that the PVC is a required component because the stabilizers are required. This is not persuasive. The stabilizers can function with the chlorinated polyethylene.

7. The statement “reference to ‘0’ PVC is an arbitrary and inaccurate figure...” is not well taken. The drafter of the document used specific numbers for specific reasons. It is clear that ingredients that are required are present and indicated by a minimum amount other than “0”. Optional ingredients are routinely referred to as having a minimum amount of “0”. This is further evidenced by the examples of the document which show runs 1, 7 and 8 having a PVC amount as “0”.
